DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 8-9, 11-15, 17, 19-22, 25, and 27-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Heshmat (US Pat. 5,833,369).

A compliant foil thrust bearing, comprising: a thrust bearing plate; a plurality of foils 42 disposed on the surface of said thrust bearing plate 60; a spring plate 62 operatively engaging the thrust bearing plate 60; a plurality of springs 48,49,66,68 disposed on the surface of said spring plate; and at least one of said thrust bearing plate 60 and said spring plate 62 including a plurality of decoupled bearing segments defined in part by a plurality of lines of weakness circumferentially dispersed about the at least one of said thrust bearing plate and said spring plate (in the spring plate the lines of weakness are 92; in the thrust plate the lines of weaken, as broadly recited, are 74 which separate an inner radial segment from an outer radial segment, as broadly recited); wherein the lines of weakness are slits; wherein the lines of weakness are slots; wherein the lines of weakness are perforations; wherein the lines of weakness are etched lines (as this claim is a product-by-process recitation, product-by-process claims are not limited to the manipulations of the recited steps, only the structure implied by the steps, as such Heshmat is capable of creating all of the compliancy lines by etching if it so wished); wherein the lines of weakness are grooves; wherein the lines of weakness are provided in the thrust bearing plate 74;

wherein each bearing segment includes at least one foil 42; wherein the lines of weakness are provided in the spring plate 62; wherein each bearing segment includes at least one spring; wherein the thrust bearing plate and the spring plate are annular plates, each having an outer diameter and an inner diameter; wherein the lines of weakness extend from the inner diameter (on spring plate); wherein the lines of weakness extend from the outer diameter; wherein the line of weakness extend from both the inner diameter and the outer diameter; wherein the lines of weakness are circumferentially dispersed about the one of said thrust bearing plate 60 and said spring plate 62 in a sequenced pattern; wherein lines of weakness 74,92 are provided in the thrust bearing plate and the spring plate to define a plurality of decoupled bearing segments in each.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 17-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Heshmat (US Pat. 5,833,369).

Heshmat (US Pat. 5,833,369) discloses the claimed invention except for the thrust bearing plate having decoupled bearing segments defined in part by a plurality of lines of weakness (Examiner reads the term "bearing segment" in this rejection, in light of the specification, to be an arced, pie-slice segment of the plate, and therefor much narrower

interpretation than that of the above 102 rejections), said lines of weakness additionally extending radially from the inner and outer circumferential edges.

However, Heshmat (US Pat. 5,833,369) does teach the use of lines of weakness (slots, slits, perforations, grooves, etched lines, etc.) extending radially from the inner and outer circumferential edges of a spring plate for the purpose of improving compliance of the bearing and enabling the bearing to accommodate excursions of the thrust runner.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have utilized the radially extending compliancy lines of the spring plate of Heshmat (US Pat. 5,833,369) as obvious alternatives to the axially extending compliancy lines of the thrust plate of Heshmat (US Pat. 5,833,369) so as to improving compliance of the thrust plate and enabling the bearing to accommodate excursions of the thrust runner, as suggested by Heshmat; additionally it would have been obvious so as to make manufacturing easier (cuts of the sort of the spring plate are easier to make than holes of thrust plate).

Response to Arguments

Applicant's arguments filed 3/6/2006 have been fully considered but they are not persuasive.

Applicant argues that in the course of rejecting the claims 16-30 under 103(a), Examiner has admitted that Heshmat does not disclose every element of the invention in accordance with the case law of Advanced Display Sys. Inc. v. Kent State Univ., 212 F.3d 1272, 1282, 43 USPQ 2d 1673, 1679 (fed. cir. 2000), thereby making the rejections of claims 1-17, 19-22, 25, and 27-30 invalid. Examiner strongly disagrees with applicant's piece meal analysis of the rejection.

Art Unit: 3682

As stated within the Office Action of 10/28/2005 (page 3/line 23 to page 4/line 1), the reason for the overlapping rejections was due to a shift in the breadth of interpretation of claims. Within the 102(b) rejections the "bearing segment" was interpreted much broader given the limited recitation of structure within the claims. The broader interpretation makes the 102(b) rejection no less valid given the limited metes and bounds set forth within the respective claims. The use of the 103(a) rejection was not implemented to cover any deficiencies in the overlapping 102 rejection, but rather to augment the overall non-patentability of the current claim language by utilizing a slightly narrower interpretation (said narrower interpretation not supported by the current claim limitations or remarks).

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e. the bearing segment as disclosed in the drawing and specification) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

eferences fail to show certain features of

Page 6

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., circumferential compliance or improved flatness) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5

USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, the use of the radially extending slots would be to improve the compliance of the bearing and enable the bearing to accommodate excursions of the relatively rotating members, as suggested by Heshmat. Additionally, as Heshmat has disclosed every single feature of applicant's invention (although not arranged identical) it is obvious to one having ordinary skill in the art at the time the invention was made to arranged a component (ie the flexible diaphragm) in a different location of the assembly such that its benefits could more directly effect the relatively rotating surfaces since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. In re Einstein, 8 USPQ 167.

FACSIMILE TRANSMISSION

Submission of your response by facsimile transmission is encouraged. Group 3600's facsimile number is (571) 273-8300. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence not permitted by facsimile transmission, see MEP. 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission. Responses requiring a fee which applicant is paying by check should not be submitting by facsimile transmission separately from the check.

Responses submitted by facsimile transmission should include a Certificate of Transmission (MEP. 512). The following is an example of the format the certification might take:

I hereby certify that this correspondence is being facsimile transmitted to the Patent and
Trademark Office (Fax No. (703) 872-9306) on
(Date)

Typed or printed name of person signing this certificate:

Art Unit: 3682

(Signature)

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and MEP. 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
